Information on the current situation for guardians in Ludvika Municipality's schools and preschools, 2020-04-03

During the past week, preschools and schools have conducted a further review based on COVID-19 and many measures have been taken around, for example, premises or buildings where many children and students are staying such as school's restaurant, where new routines have been introduced.

The staff situation has to some extent changed at our preschools and schools during the week. We have had a higher staff absence, as we really urge our staff to take the recommendations of the Public Health Authority seriously. Stay at home with symptoms.

The absence of staff creates the need to take further measures in our operations such as merged groups, changes in schedule, withdrawal of swimming lessons, more outside stay and shorter school days.

We also feel that the contact has been good between our operations and the home. What we can see is that in relation to the changed in staff situation, the administration may also need to take more measures in the future.

In this situation, the administration expects everyone to assume their responsibility and adhere to prevailing guidelines. Be at home with symptoms, healthy children and students will continue to come to school.
